Youth Risk and Resiliency in New Mexico: Results of 2013 NM-YRRS

The New Mexico Youth risk and Resiliency Survey (NM-YRRS) is a survey used to assess the behavioral health risks and protective factors among New Mexico public high school and middle school students. The NM-YRRS collects data from students about behaviors that risk health or cause premature death (unintentional injury, violence, mental health, tobacco use, alcohol use, drug use, sexual activity, nutritional practice, and physical activity), and resiliency factors (assets or protective factors such as relationships with parents or guardians, peers, teachers and adults in the community; student involvement in the school and community; academic behaviors, etc.).

In this presentation you will learn some of the key trends in health risking behaviors in the state from the 2013 NM-YRRS, you will learn where to access the survey data and reports, and learn about new questions added in 2013 and new topics to be covered in the next round of data collection (autumn of 2015).

Presenter: Linda Peñaloza, PhD

Date: Tuesday, March 3, 2015

Time: 12:00 to 1:00 pm

Place: RIB Commons
